
Meeting Report

Date: 2026-05-14

Speakers: Ghali, Unknown, Ayoub

1. Context

The meeting is an engineering key review at GitLab, held on February 18, 2021. The objective is to discuss various engineering metrics, propose changes to the meeting structure, and review key performance indicators (KPIs). The attendees include Ghali, Eric Johnson, and other team members.

2. Key points

- The proposal to break up the engineering meeting into four department key reviews was discussed, with a suggested two-month rotation to avoid adding new meetings.
- The team discussed the R&D overall MR rate and R&D wider MR rate, with concerns about duplication and the need for clearer definitions.
- The team decided to track the percentage of total MRs that come from the community over time instead of using the current complex taxonomy.
- The postgres replication issue was discussed, with a plan to create a dedicated host for the data team and improve database performance.
- The team reviewed defect tracking and SLO achievement, with a focus on improving metrics and addressing underlying problems.

3. Decisions

- The team decided to try a two-month rotation for the department key reviews.
- The team decided to track the percentage of total MRs that come from the community over time.
- The team decided to create a dedicated host for the data team to improve postgres replication performance.
- The team decided to focus on improving defect tracking and SLO achievement metrics.

4. Action items

- Owner: Lily | Task: Work with Max to transition to the new metric for community MRs | Due: Unspecified
- Owner: Steve | Task: Partner with the data engineering team to improve postgres replication performance | Due: Unspecified
- Owner: Unknown | Task: Investigate the spike in meantime to close for S2 | Due: Unspecified
- Owner: Christie | Task: Provide an update on the investigation into the spike in meantime to close for S2 | Due: Next meeting
